

Emergency response solutions

In addition to our standard-setting drinking fountains and electric water coolers, Haws is the industry leader in the development and manufacture of emergency drench showers and eyewashes. Our educational facility-oriented emergency equipment is designed to provide ready, yet unobtrusive, access at a moment's notice. See our complete emergency equipment line at www.hawsco.com/ag.

Model 8122

Our popular ceiling-mounted drench shower features a 10-5/8" ABS plastic showerhead and a stay-open ball valve activated by a pull rod. Provides great response in a compact package.

Model 7610

Our sink or countertop mounted polished chrome-plated brass single-action swing-down eye/face wash that features twin ABS Feather-Flo® heads. This model swings down into place with automatic activation, providing barrier-free access within ADA/ABA guidelines.

Model 8163

The Model 8163 features a 10 1/2" ceiling-mounted high-polished stainless-steel showerhead and a stay-open ball valve that is activated by an extra-long pull rod.

Model 8356WC

Our barrier-free recessed wall-mounted combination eye/face wash and shower (shower not shown). The 10 1/2" stainless steel showerhead can either be flush mounted to the ceiling or mounted extending down from the ceiling. Pulling down on the cabinet access door activates the ABS plastic Omni-Flo™ wrap-around eye/face wash. Pulling down on the handle to the right of the door activates the overhead drench shower.

Hard-working products for schools and other facilities.

In 1906, Luther Haws invented the first drinking faucet to address the sanitary issues of Berkeley, Calif. schoolchildren drinking from a shared cup. Since then, his company - now in its fourth generation of family management - has continued to focus on institutional drinking fountains and electric water coolers. Drinking fountains and electric water coolers are our passion, and that passion results in an ever-growing list of patents and new products year after year.

Haws continues to lead with the introduction of SANIGUARD® antimicrobial protection and Hydration Station, an environmentally friendly water dispenser, available fall 2008. The Haws name has been synonymous with school drinking fountains for more than a century - and counting!

5054EG

Lever-handled, shielded EnviroGuard™ bubbler - sanitary solution for classroom applications.

1501

[Enameled iron drinking fountain - barrier-free beauty. Providing form, function and durability.]

1409

[Powder-coated cast aluminum fountain - barrier-free, three-bubbler workhorse.]

Drinking fountain leaders

Haws manufactures the finest quality drinking fountains available anywhere. For schools and colleges, we offer the features, vandal resistance and low maintenance required today! Consider the top selling models shown below or visit us at www.hawsc.com/ag to see our complete lineup.

Model 1409

This three-bubbler, wall-mounted cast aluminum fountain addresses two issues commonly encountered with installations today — weight and access. The cast-aluminum material provides the durability required in vandal-resistant applications without the weight of cast iron, while the wheelchair-accessible design, which incorporates a smooth vandal-resistant bottom plate, complies with the Americans with Disabilities Act guidelines when installed at the proper height.

Model 1441

Our popular barrier-free, two-bubbler, wall-mounted, cast-aluminum drinking fountain. It has a white powder-coated finish, twin polished chrome-plated brass bubbler heads (locked to bowl), recessed push button valves, polished chrome-plated waste strainer and a vandal-resistant bottom plate.

Model 1107L

Now standard with SANIGUARD® antimicrobial protection, equipped to inhibit the growth of bacteria, mold and mildew on treated surfaces. The 1107 barrier-free drinking fountain provides an attractive 14-gauge stainless steel, low-profile design to comply with the American with Disabilities Act guidelines, when installed at the proper height. The 1107L also incorporates a unique integrated trap design outside the wall, allowing for greater flexibility of installation.

Model 1501

Our barrier-free "Hi-Lo" wall mounted cast-iron drinking fountain is finished in white enamel, with a matching back plate. It features two fountains with polished chrome-plated brass bubbler heads, push-button valves, vandal-resistant bottom plates and polished chrome-plated waste strainers.

Model 1119.14

Our tough and attractive satin finished 14-gauge stainless steel "Hi-Lo" wall-mounted drinking fountain. Features include: push-button valves, polished chrome-plated brass bubbler heads and waste strainers, a matching stainless-steel back panel and vandal-resistant bottom plates.

Innovative products focused on health!

Model 5874

Haws' patented actuator valve integrates three fountain control functions into one amazing design. The internal structure cushions abrupt on/off pressure surges that can cause damaging "water hammer," while the internal screen removes particulates from the water stream. And, the entire control valve assembly can be serviced and adjusted from the front of the fountain without removing access panels!

The 5874 actuator valve is standard on select Haws drinking fountains. The 5874 is not available on freeze-resistant drinking fountains.

Model 1117L

Now standard with SANIGUARD® antimicrobial protection, equipped to inhibit the growth of bacteria, mold and mildew on treated surfaces. Our newest dual drinking fountain utilizes 14-gauge stainless steel and a unique height-selectable mounting system that, when installed properly, allows each fountain to be installed in heights ranging from child through adult wheelchair, to adult-standing levels. The 1117L also incorporates our unique outside-the-wall integrated trap design for greater installation flexibility.

Model 5054EG

Our classroom sink with deck-mounted fountain features the patented EnviroGard™ bubbler. This product eliminates the potential for utility sink clean-ups to contaminate the drinking fountain outlet, because the bubbler is shielded when not in use.
