

AXION ADVANTAGE[®]

EMERGENCY SHOWER AND EYE/FACE WASH RETROFIT KITS

Achieve Compliance and Solve Your Emergency Eye/Face Wash & Shower Flow Problems

Haws[®] AXION Advantage provides compliance at a significantly lower cost than replacing an entire unit.

With included parts, AXION retrofit kits convert 80% of existing competitor units. These kits can update an eye wash to an eye/face wash, ensuring full eye and face flushing while mitigating your most common flow problems, including:

1 Lack of Simultaneous Flow

When installed together, the AXION eye/face wash and showerhead effectively re-distributes water providing a consistent flow rate that meets simultaneous flow requirements.

2 Lack of Controlled Non-Injurious Flow

Leveraging Haws patented technology, AXION products deliver an eye/face wash with inverted water streams for even, consistent and predictable stream height and circumference. The design prioritizes user comfort while effectively sweeping contaminants away from the eyes, encouraging use to the full 15-minute ANSI/ISEA Z358.1-2014 requirement.

3 Uneven Flow Pattern

AXION provides a controlled flow to both eyes simultaneously with comfortable water pressure.
